

Amendments to the Specification

On page 16 at line 5, amend the paragraph as follows:

In Figure 4, the gap sealing radially outside on the pump piston 3 2 is schematically represented. As an alternative to the sealing already presented in the introductory part of the description, the pump piston 3 2 may have as a result of the gap size as such sealing lips 15, which are firmly connected to the pump piston 3 2 and lie against an inner wall 16 of the pump housing. They may be, for example, lips made of plastic, for instance of PVC, PP or PE.
